SHEET METAL TECHNOLOGY

METAL ROOFING

Samesor offers manufacturing applications for a wide range of metal roofing product designs and types covering roof tile panels as well trapezoidal roofing profiles.

CLADDING & FACADES

Samesor produces manufacturing applications for a variety of cladding products including profiles, panels and facade cassettes for buildings.

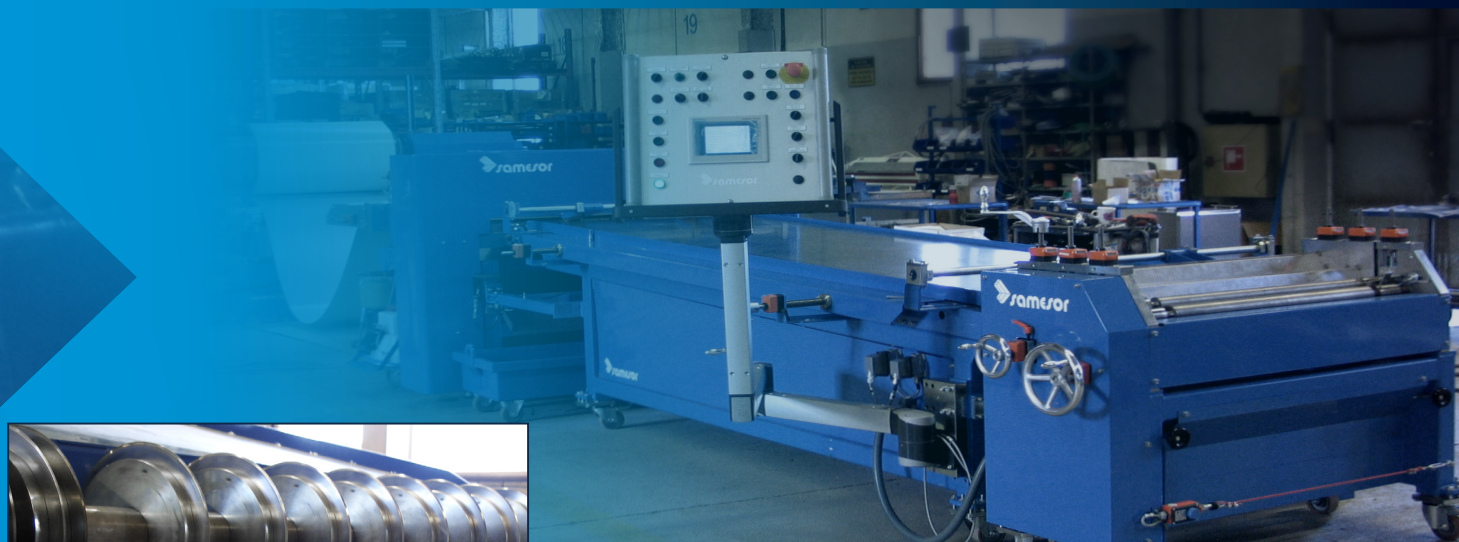

We serve our customers in the sheet metal working industry worldwide by designing and manufacturing advanced production lines for the fabrication of sheet metal products.

Samesor machines are well-known by their reliability, flexibility and efficiency based on our experience of more than 50 years.

STEEL CONSTRUCTION

Our range of manufacturing solutions for steel construction includes machines for prefabricated light steel frame and element production, as well as machines for purlin production. The key features of Samesor equipment for steel framing are their versatility and flexibility.

OTHER APPLICATIONS

Samesor range of machines includes a variety of other machines and production applications such as machines for sandwich panel skins, cut-to-length and slitting lines, tube casing machines and lines for flashing products.
